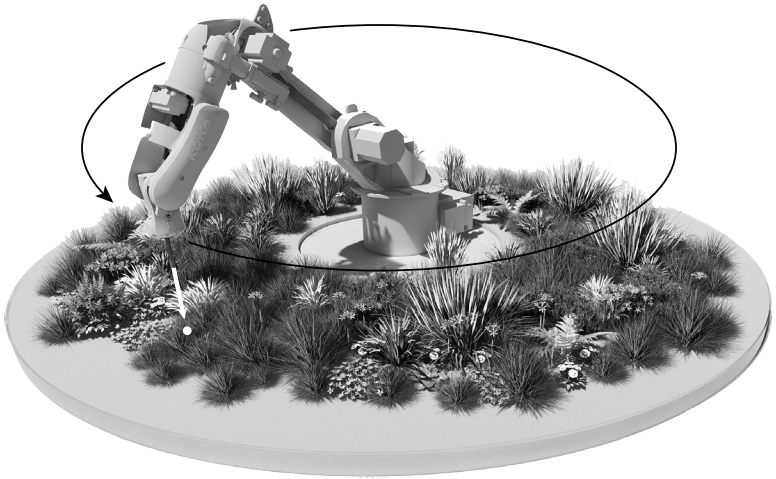
ECOLOGICAL ROBOTICS

Brendan Harmon, Hye Yeon Nam, Marcio de Querioz, Hunter Gilbert, and Corina Barbalata

Ecological robotics is an introduction to environmental applications for robots. In this course you will learn how to build DIY robots, program industrial robots, and design custom end effectors. Through a series of projects you will design, prototype, and program robotic processes for planting.

- Develop creative environmental applications for robotics
- Get hands on experience with aerial and collaborative industrial robots
- Customize and program your robot to plant
- Open to Artists, Designers, and Engineers



Patrick Taylor Hall | Robotics Lab
Tuesdays & Thursdays
4:30 - 6:00 pm
